

# HARDDRIVE INSTALLATION

For this harddrive installation, you WILL need the following items. A good 40 or 60 megabyte (preferably) IDE harddrive unit; the enclosed Micro Innovations harddrive interface card; a standard IDE 40 pin data cable - pin #1 is stamped on the interface card to make it easy for you to plug onto the card; either an IBM compatible power supply with a long enough disk drive power cord to reach into the ADAM and plug onto the ide drive OR use the enclosed diagram and CAREFULLY attach a power supply cable to the incoming ADAM power (may not be heavy enough in ALL cases to run the harddrive). Mount the harddrive onto the plastic shell of the top casing of the ADAM in the position of datadrive # 1 using the normal mounting of the harddrive case itself.

IF you are not experienced enough OR a little worried about installing the unit, please contact ADAM NEWS NETWORK for help and/or installation (cheap insurance).

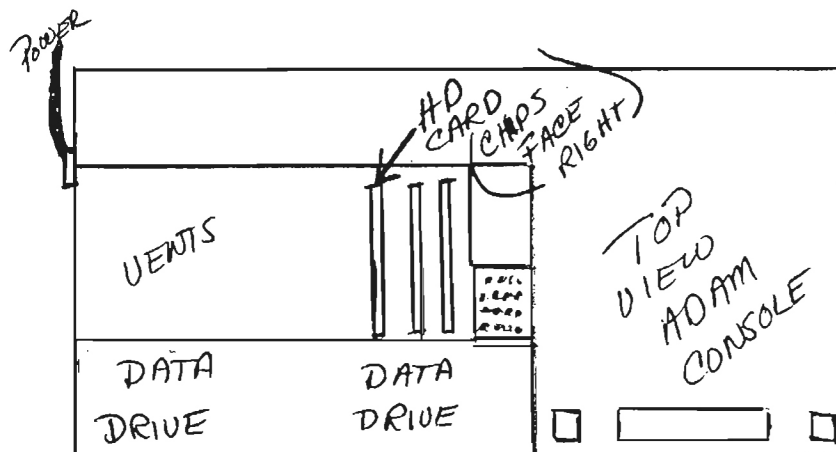

+++++

## NOTE:

This harddrive card is tested immediately BEFORE shipping to you; IF your attempt at installation fails and/or damages the card in any way making correct installation impossible, YOU are responsible for its replacement cost AND the cost of any other computer equipment it may damage. The entire process is fairly foolproof (we have never ruined anything), BUT we can not accept responsibility for any actions beyond our control.
